With a built-in RF reader, keypad for Personal Identification Numbers (PIN), and a sophisticated biometric fingerprint analyzer, the FINGER007 offers up to three levels of ID verification. Any combination of proximity, PIN, and biometric may be used and different verification levels can be custom programmed for each user or user group.

Four independent input ports can be utilized for a wide variety of controls including exit buttons, door contacts, PIR sensors and fire detection equipment. Actions to be taken and time settings can be programmed with the front keypad or via Ness Dual Pro Application software.

The FINGER007 can be used both as a stand-alone system and also be networked. All control setting values such as ID numbers, inputs/ outputs, real-time clock, time schedules, and event transaction reports can be uploaded and/or downloaded to and from the host computer.

The compact and contemporary unit is easily installed and programming requires no significant knowledge of access control or time & attendance. The Three-LED indicator lights inform you of the systems operating status at real time and the digital display acts as a programming aid as well as a regulation time clock.

By bundling the ultimate in high security access control and comprehensive employee management tools into a compact user friendly unit, the field proven NESS IDTECK FINGER007 has made real what until recently was thought only to be possible in science fiction.
